

D'Ascenzi Pavimenti, Italy came to Numold in 2004 to commission bespoke patterns of Olde York PU moulds similar to Bradstone Old Town range. The moulds were designed using the Flexform patented Polyurethane mould system to create Auto-demould format for the D'Ascenzi robotic machinery using steel carrier. Working perfectly over 14 years with Polyurethane, the family owned business made a decision to change the moulds to ABS with Numold's Special Aluminium design to give the minimum taper / draft angle – making the end product almost indistinguishable from PU version at 3 times less the cost. Giving D'Ascenzi the competitive edge, without any compromise on design with Numold's ABS version.

#### AVAILABLE SIZES

30x30x4cm

45x60x4cm

30x60x4cm

30x45x4cm

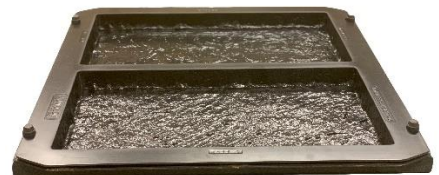

60x60x4cm

45x45x4cm

4 Patterns of each size

Original PU Mould

New ABS version

Advantages of ABS mould products is that they are much cheaper and faster to produce up to 100 moulds per shift. Perfect solution where high humidity and extreme heat make polyurethane a challenging solution – where ABS is stable and robust in any situation and impervious to all types of mould oil.
