

CASE STUDY

Ranch Style - Post & Rail Fencing moulds

Providing a Precast Concrete alternative to Wooden Posts and Rails for the Equine Industry, which are indistinguishable from real timber. We have used the best grained and straightened Larch Timber, cut to size and shot blasted and brushed along the grain to bring out deep definition. The Post and Rails were then moulded with silicone rubber to provide masters, from these Aluminium Tooling was produced with heating elements. Further engineering later the tooling was finally ready to cast one piece high quality, durable polyurethane moulds.

Our client in Ireland has provided photos of finished projects showing a 3 rail combination.
